PROFESSIONAL SUMMARY

Data Analyst with 4+ years of experience at Ericsson across telecom service monitoring and analytics. Experienced in KPI reporting, data preparation and validation, performance and trend analysis, SLA monitoring, root-cause investigation, and dashboard development. Skilled in SQL, Excel, Power BI, Python (Pandas, NumPy), and Tableau. Uses AI tools as an analytical aid for brainstorming, drafting queries or formulas, troubleshooting, and documenting findings, with outputs checked against source data. Focused on turning operational data into clear insights for business and technical teams.

CORE SKILLS

Data Analytics: Data cleaning, exploratory data analysis (EDA), trend and variance analysis, data validation, anomaly identification, root-cause analysis, KPI definition

SQL & Databases: Joins, aggregations, CTEs, subqueries, window functions, data extraction and reconciliation

BI & Reporting: Power BI, DAX basics, Tableau, Excel dashboards, KPI reporting, interactive visuals, data storytelling

Excel: PivotTables, VLOOKUP/XLOOKUP, INDEX-MATCH, conditional formulas, reporting and data checks

Python: Pandas, NumPy, Matplotlib, Seaborn, Jupyter Notebook, data cleaning and analysis

AI & Productivity: Generative AI tools for prompt-based analytical support, SQL/Python/formula drafting, troubleshooting, summarizing findings, and documentation; verify AI outputs before use

Telecom & Collaboration: Operational performance, service quality, incident trends, SLA monitoring, Jira, stakeholder communication, cross-functional collaboration

PROFESSIONAL EXPERIENCE

ERICSSON GLOBAL PVT. LTD. | May 2022 – June 2026

Data Analyst (internal transition; 1.5 years)

- Prepared and validated operational datasets for recurring KPI reporting, organizing categories, priority levels, turnaround time, and completion status across 300+ monthly records.
- Used SQL queries, including joins, CTEs, and window functions, to extract and reconcile data before reporting.
- Analyzed performance trends, recurring patterns, and anomalies to investigate root causes and support follow-up actions.
- Tracked turnaround time against performance targets and supported reporting on 85–90% SLA compliance across 300+ monthly records.
- Built and maintained Power BI and Excel dashboards, including data refresh, validation, KPI visuals, and commentary for stakeholder reporting.
- Used Python (Pandas and NumPy) to support recurring data cleaning and trend analysis, reducing manual reporting effort by a reported 40% per month.
- Documented recurring issues and recommendations; shared findings with cross-functional stakeholders and tracked follow-up actions in Jira.

Service Monitoring Engineer (first 2.5 years) | Telecom Operations

- Monitored telecom service performance and operational KPIs, supporting service-quality tracking and customer-impact analysis.
- Tracked incidents, change activities, resolution timelines, and escalation status using internal Ericsson tools and operational records.
- Reviewed recurring service issues and performance exceptions, coordinating with relevant teams for investigation and follow-up.
- Maintained accurate operational updates and supported KPI/SLA reporting, building domain knowledge that supported the transition into analytics.

TELECOM CUSTOMER CHURN ANALYSIS | Python, Pandas, NumPy, Matplotlib, Power BI, AI-Assisted Analytics

- Analyzed telecom customer data to identify churn patterns across contract types, tenure groups, payment methods, monthly charges, internet services, and support add-ons.
- Performed data cleaning and preprocessing by identifying duplicates, handling missing values, standardizing category labels, and converting charge columns into appropriate numeric data types.
- Conducted exploratory data analysis (EDA) and developed churn, retention, tenure, and revenue-related KPIs to support data-driven business decisions.
- Built interactive Power BI dashboards to visualize churn trends, customer segments, and key performance indicators for business reporting.
- Applied AI-assisted analytics to generate analysis ideas, support Python and DAX formula development, and summarize customer churn patterns for further investigation.

- Used data-driven insights to recommend targeted retention strategies for new customers, month-to-month subscribers, high-charge customers, and customers without selected support services.

EDUCATION & CERTIFICATION

Bachelor of Technology | Swami Vivekananda Institute of Science and Technology | 2017–2021
Certification: Nextleap Top Fellowship Certification For AI Data analysis |2026 March-September
