Data Analyst Portfolio Project

BUMBLE

User Behavior & Engagement Analysis

Python | Pandas | Tableau

Created by **Sushmita Sharma**

My Data Analysis Process

1. Data Exploration

Inspected the dataset, columns, data types and missing values.

2. Data Cleaning

Checked missing values, unreported income values and potential outliers.

3. Data Preparation

Converted the last_online field to datetime and created age and income groups.

4. Exploratory Data Analysis

Explored profile characteristics using Python and visualisations.

DATASET OVERVIEW

Key Dataset Metrics

59,944
Total Profiles

32.34
Average Age

92.9%
Single Profiles

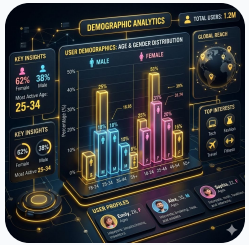

31,063
San Francisco Profiles

What I explored: Profile demographics, relationship status, location, education and job categories.

Exploratory Data Analysis

What I Explored in the Data

Python analysis · Tableau visualization

Profile Demographics

Explored age and gender distributions.

Geographic Distribution

Examined profile locations, including San Francisco.

Education & Occupation

Explored education levels and job categories.

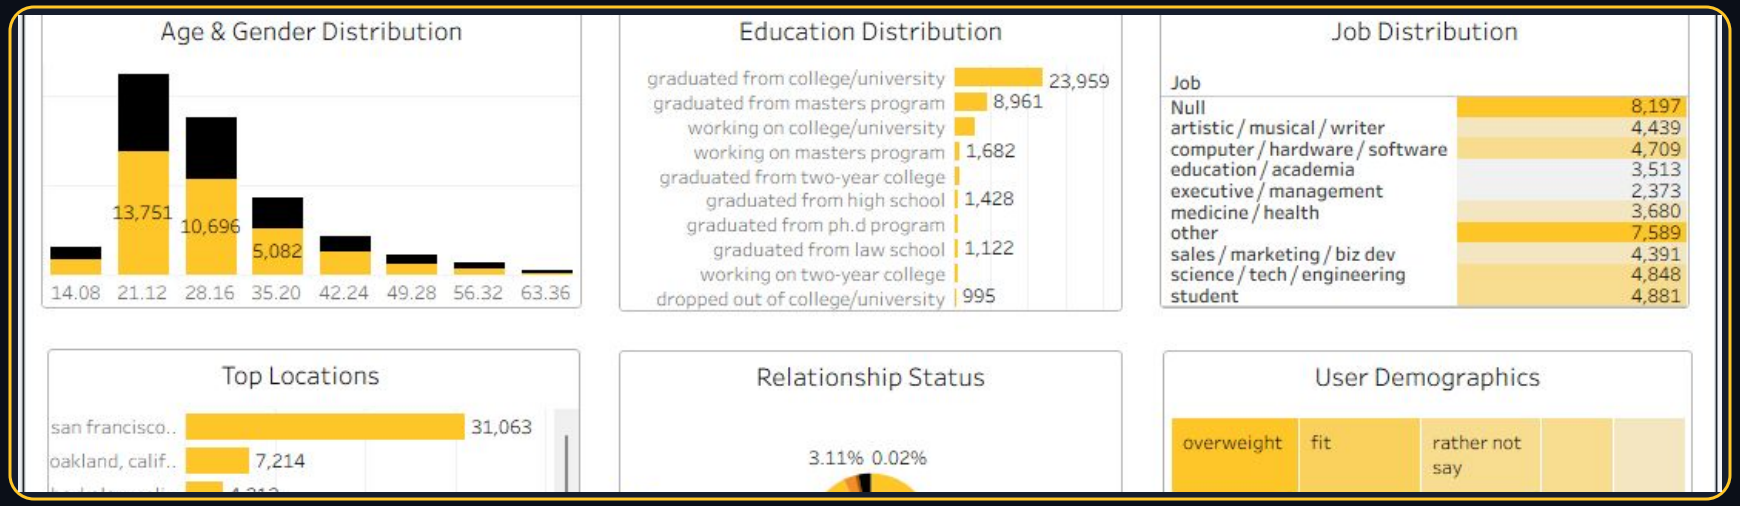

Relationship & Lifestyle

Reviewed relationship status and body-type categories.

Tools Used

Python | Pandas | Tableau

Let's discuss!

Which profile dimension would you explore first—and why: **age**, **location**, **education**, or **relationship status**?

I'd love to hear your perspective!
